PREFACE 4

CHAPTER I. BASIC INFORMATION ON INVESTIGATION AND TESTING OF STRUCTURES AND BRIDGES 5

1. Subject, aim, tasks reasons and types of investigation and testing of structures and bridges 5
 - 1.1. General information on safety and durability of structures and the need of their experimental investigation 5
 - 1.2. Subject and basic concepts 8
 - 1.3. Aim and tasks of investigation and testing 9
 - 1.4. Types of investigation and testing 10
2. Main stages and preliminary studies 11
 - 2.1. Main stages 11
 - 2.2. Studying the technical documentation and the operational conditions 12
3. Technical investigation of structures and bridges – Scope and characteristics 14
 - 3.1. General principles and scope 14
 - 3.2. In-situ inspection 15
 - 3.3. Testing the quality of structural materials 18
 - 3.4. Choice of structural members and locations for investigation, measurement and observation 19

CHAPTER II. METHODOLOGICAL CHARACTERISTICS OF STATIC FULL-SCALE TESTS 21

4. Static test schemes. Static test loads: types, requirements and sizes 21
 - 4.1. General principles 21
 - 4.2. Types of test schemes and characteristics 21
 - 4.3. Types of test loads 22
 - 4.4. Requirements to the test loads 24
 - 4.5. Test load sizes 25
5. Location of test loads 27
 - 5.1. Reinforced concrete slabs 28
 - 5.2. Reinforced concrete beams 29
 - 5.3. Reinforced concrete columns 31
 - 5.4. Trusses and arches 33

6. Organization and performance of static test loads. Stages, degrees and states. Signs of failure 33
 - 6.1. Organization of test loads 33
 - 6.2. Realization of test loadings 37
 - 6.3. Signs of failure 40
7. Determination of positions, number and location of measuring instruments 41
 - 7.1. General principles 41
 - 7.2. Peculiarities in investigating total deformations 42
 - 7.3. Investigating the formation and opening of cracks in reinforced concrete cross-sections 43
 - 7.4. Peculiarities in investigating a one-dimensional stress state 44
 - 7.5. Peculiarities in investigating a two-dimensional stress state 46
 - 7.6. General principles for investigating a volume (3D) stress state 48
8. Effect of temperature and humidity on the tested structures and measuring instruments. Reduction of deformation 49
 - 8.1. Effect of temperature variation 49
 - 8.2. Effect of external humidity 54
9. Errors in measurements and estimating of the accuracy of results 54
 - 9.1. Types of errors 54
 - 9.2. Estimation of the accuracy of results 55
10. Experimental determination of rigidities, deflections and forces 59
 - 10.1. Experimental determination of bending rigidities 59
 - 10.2. Experimental determination of deflections in the theoretical computational schemes of the structures 60
 - 10.3. Experimental determination of support moments in continuous and anchored beams and truss rods 62
11. Analysis, conclusions and assessment of the behaviour of statically tested structures: qualitative and quantitative indices and criteria 64
 - 11.1. Qualitative analysis 64
 - 11.2. Quantitative analysis 67

CHAPTER III. METHODOLOGICAL CHARACTERISTICS OF DYNAMIC FULL-SCALE TESTS 71

12. Dynamic full-scale tests. Aim, tasks, test loads and effects. Types of vibrograms and oscillograms 71
 - 12.1. Significance, aim and tasks 71
 - 12.2. Types of dynamic test loads 72
 - 12.3. Realization of dynamic test loading 75
13. Experimental determination of dynamic parameters and characteristics 76

- 13.1. Types of vibrograms and oscillograms 76
- 13.2. Initial analysis of vibrograms and oscillograms 79
- 13.3. Experimental determination of dynamic coefficients 80
- 13.4. Determination of natural frequencies 82
- 13.5. Determination of the damping coefficient and damping decrement 83
- 14. Analysis, conclusions and assessment of the behaviour of dynamically tested structures and bridges 84
 - 14.1. Assessment of the stress state and strength 84
 - 14.2. Assessment of serviceability 85
- 15. Assessment of the effect of vibrations on production processes and humans Protection against harmful vibrations 86
 - 15.1. Assessment of the effect on production equipment 86
 - 15.2. Effect of vibrations on humans 87
 - 15.3. Protection against harmful vibrations 88

CHAPTER IV. MODELING OF BUILDING STRUCTURES 91

- 16. Polarization optical structural modeling 93
 - 16.1. General principles 93
 - 16.2. Nature and principles 93
- 17. Physic-mechanical structural modeling 98
 - 17.1. Nature and principles 98
 - 17.2. Basic methodological issues 99
 - 17.3. Types of scales and their determination 100
 - 17.4. Characteristic numbers (invariants) 101
- 18. Brittle varnish coating technique 102
 - 18.1. General information 102
 - 18.2. Testing methodology 102

CHAPTER V. PRACTICAL METHODS FOR DIAGNOSTICS, INVESTIGATION AND NON-DESTRUCTIVE TESTING OF STRUCTURES AND BRIDGES 105

- 19. Mechanical methods for concrete NDT in structures by “partial local damages” 108
 - 19.1. By cutting out of cores 108
 - 19.2. By pulling out concrete rods 110
 - 19.3. New methods “cut-and-pull” tests 110
- 20. Mechanical instrumentation (hardness) NDT methods 113
 - 20.1. By plastic indentation 114
 - 20.2. By elastic rebound 116

- 21. Physical NDT methods for diagnostics of structures and bridges 119
 - 21.1. Method of ultrasonic resonance 119
 - 21.2. Vibration method 121
 - 21.3. Ultrasonic impulse method 123
 - 21.4. Magnetic techniques for diagnostics and NDT 129
 - 21.5. Radiometric techniques for diagnostics and NDT 130
 - 21.6. Complex techniques for diagnostics and NDT of members and structures 131
- 22. Experimental determination of residual (initial) stresses 133
 - 22.1. Character and occurrence 133
 - 22.2. Experimental determination of residual stresses 135

CHAPTER VI. QUALITY AND RELIABILITY OF STRUCTURES

- 23. Types of defects and damages and their effect on the state of building structures and bridges 137
 - 23.1. General principles and importance 137
 - 23.2. Basic terms 137
 - 23.3. Types of structural defects, damages and failures (DDF) 138
 - 23.4. General conclusions from the analysis and recommendations 140
- 24. Reliability of building structures. Basic characteristics and inspection methods 141
 - 24.1. General principles and terms 141
 - 24.2. Determination of the reliability characteristics 142
 - 24.3. Inspection methods 144

CHAPTER VII. EQUIPMENT AND INSTRUMENTATION FOR MEASURING MECHANICAL QUANTITIES IN INVESTIGATIONS AND TESTING 145

- 25. Measuring instrumentation: basic requirements and classifications. Principles of measuring mechanical quantities 145
 - 25.1. Requirements for instrumentation 145
 - 25.2. Peculiarities and principles in measuring and determining mechanical quantities 147
- 26. Typical instruments for measuring displacements and rotations 149
 - 26.1. Rod and lever deflectometers 150
 - 26.2. Wire deflectometers 151
 - 26.3. Dial gauges and deflectometer indicators 154
 - 26.4. Hydrostatic and optical (geodetic) deflectometers and clinometers 155

- 27. Mechanical and electrical instruments for measuring local and relative linear deformations 159
 - 27.1. Mechanical lever strain gauges 159
 - 27.2. Dial and dial-lever strain gauges 160
 - 27.3. Electrical devices for measuring mechanical quantities 163
- 28. Recording devices, apparatuses and systems 168
 - 28.1. Mechanical recording devices 168
 - 28.2. Electric recording apparatuses and systems 169
- 29. Testing systems and equipment: test rigs, presses, jacks, dynamometers 172
 - 29.1. Test rigs 172
 - 29.2. Loading mechanisms and systems 175
